Student Name: _____ Birth date: _____

Z#: _____ Date: _____

F Medical Exemption

F Religious Exemption

F Permanent

F Temporary

Risks of Nonimmunization:

Immunization is a safe and effective way to protect you against vaccine-preventable disease that can hurt, cripple and even kill. The following contagious diseases can spread among nonimmunized individuals in a group situation, such as a college campus.

1. Measles: is a serious disease characterized by rash and moderate to high fever. It can lead to pneumonia, serious ear infections, deafness, convulsions, inflammation of the brain and even death. The severe complications develop in one out of every 1,000 cases.
(Rubeola)

5. Hepatitis B: is an infection of the liver caused by the Hepatitis B virus. Generally, the highest risk of Hepatitis B infection is associated with occupations, lifestyles, or environments in which there is frequent contact with blood products from infected persons. Hepatitis B
